

## “File name is too long”

Here are some suggested fixes.

If you get this message when trying to save a document in Word try the following:

- Start - UDT Software - Open Office - Writer
- Minimize Writer and try again to save in Word.

Here are some other suggestions:

- Open the document from My Documents instead of opening Word first.
- Open a new document, then copy and paste the text into it.
- Open Notepad, then copy and paste the text there.
- Save just after you open, save in the middle and save at the end.
